

## Risk Assessment: Severe Winter Storms

By: University of Kentucky Hazard Mitigation Grants Program Office (UK-HMGP)  
With: National Weather Service (NWS)

### **Types**

This analysis relies on National Weather Service (NWS) recommendations with additional analysis by the University of Kentucky Hazard Mitigation Grants Program Office (UK-HMGP). The types of Severe Winter Storms are the definitions used in the warnings NWS provides for this hazard type<sup>1</sup>.

**WINTER STORM:** A life-threatening winter storm with snow, ice, strong winds, and/or cold temperatures.

**HEAVY SNOW** is 6 inches of snow or more in 12 hours; or 8 inches of snow or more in 24 hours

**ICE STORM:** Ice accumulations that could cause extremely dangerous conditions and significant damage.

**BLIZZARD**<sup>2</sup>: A severe winter storm with winds 35 mph or greater AND significant snow or blowing snow with visibility less than 1/4 mile.

---

<sup>1</sup> See: <https://www.weather.gov/unr/hwd>.

<sup>2</sup> The Blizzard severe winter storm type is not analyzed for the Commonwealth of Kentucky: From 2001 to 2018, there has been one event of "Blizzard" according to the NCEI Storm Events Database. This event occurred in the Butler County zone (in western Kentucky) and was part of a more wide-reaching event on January 22, 2016. It produced no recorded deaths, injuries, property damage, or crop damage.

## **Previous Occurrence and Impacts**

During its 2013-2018 mitigation planning cycle, Kentucky experienced the following severe winter storm events. Per multiple meetings with Kentucky branches of the National Weather Service (NWS), the National Oceanic and Atmospheric Administration's (NOAA's) National Centers for Environmental Information's (NCEI's) Storm Events Database represents best available data for locations, previous occurrences, and impacts resulting from severe winter storms. The events recorded are classified as "Winter Storms," "Ice Storms," and "Heavy Snow." It is these event types that create the effects that justify mitigation activity. Ice Storms can damage assets and isolate populations; Heavy Snow can affect infrastructure and isolate populations; and Winter Storms are combinations of wintry precipitation like sleet and freezing rain that can affect assets and endanger populations.

As a note on formatting, NCEI's Storm Events Database treats Winter Storm (and Ice Storm and Heavy Snow) events as individual to each county affected when, in fact, the event was one event that affected multiple counties. For example, between 1/1/2013 and 12/31/2015, there were fifteen (15) Winter Storm events affecting anywhere from three (3) counties to the whole Commonwealth. NCEI records 490 records, however: One record for each county affected by the one of fifteen events. The NCEI Storm Events Database does not allow more than 500 records at a time; so, it artificially truncates after 500. Consequently, where more than 500 records occurred between 1/1/2013 and 9/30/2018, the data had to be reviewed within shorter time frames. This reflected in the tables below by having multiple sets of tables.

The above caveat does not apply for Heavy Snow or Ice Storm because there were too few Heavy Snow or Ice Storm events to warrant any need to synopsize the results.

For ease of reading, summary tables are provided for Winter Storms, Ice Storms, and Heavy Snow that show the Winter Storm, Ice Storm, and Heavy Snow event, the number of counties affected, and impacts. However, location still has to be accounted for in a hazard mitigation plan. So, the full tables for Winter Storms, Ice Storms, and Heavy Snow are included in this section. They are included at the end of the section.

The summary tables also illustrate how this analysis defines "event" for the purpose of identifying a probability defined as average frequency of event per year.

**Table WS-1. Winter Storm Event Summary, January 1, 2013 – September 30, 2018**

Event	# Counties Affected	Property Damage	Crop Damage	Deaths	Injuries
1/25/2013	3	\$0.00	\$0.00	0	0
3/5/2013	3	\$0.00	\$0.00	0	0
3/17/2013	7	\$0.00	\$0.00	0	0
11/26/2013 – 11/27/2013	5	\$0.00	\$0.00	0	0
12/5/2013 – 12/6/2013	39	\$70,000.00	\$0.00	0	0
1/2/2014	1	\$0.00	\$0.00	0	0
1/20/2014	10	\$0.00	\$0.00	0	0
2/2/2014 – 2/4/2014	70	\$820,000.00	\$0.00	0	0
2/14/2014	12	\$0.00	\$0.00	0	0
3/2/2014 – 3/3/2014	117	\$140,000.00	\$0.00	0	0
3/16/2014	1	\$0.00	\$0.00	0	0
11/16/2014	7	\$0.00	\$0.00	0	0
1/23/2015	2	\$0.00	\$0.00	0	0
2/15/2015 – 2/21/2015	71	\$28,000.00	\$0.00	1	0
3/4/2015 – 3/5/2015	68	\$0.00	\$0.00	1	0
1/21/2016 – 1/22/2016	53	\$0.00	\$0.00	0	0
2/14/2016	11	\$0.00	\$0.00	0	0
1/12/2016 – 1/16/2016	71	\$6,000.00	\$0.00	1	0
2/6/2018	9	\$0.00	\$0.00	0	0
3/11/2018	27	\$150,000.00	\$0.00	0	0
3/20/2018 – 3/24/2018	26	\$200,000.00	\$0.00	0	0

**Table WS-2. Ice Storm Events Summary, January 1, 2013 – September 30, 2018**

Event	# Counties Affected	Property Damage	Crop Damage	Deaths	Injuries
1/15/2013	2	\$0.00	\$0.00	0	0
1/25/2013	13	\$0.00	\$0.00	0	0
12/8/2013	4	\$0.00	\$0.00	0	0
2/4/2014	11	\$0.00	\$0.00	0	0
3/2/2014	1	\$0.00	\$0.00	0	0
2/20/2015	2	\$0.00	\$0.00	0	0

**Table WS-3. Heavy Snow Events Summary, January 1, 2013 – September 30, 2018**

Event	# Counties Affected	Property Damage	Crop Damage	Deaths	Injuries
1/17/2013	3	\$0.00	\$0.00	0	0
3/24/2013	4	\$0.00	\$0.00	0	0
12/6/2013 – 12/10/2013	3	\$0.00	\$0.00	0	0
1/21/2014 – 1/25/2014	26	\$0.00	\$0.00	0	0
2/2/2014	20	\$0.00	\$0.00	0	0
2/12/2014 – 2/14/2014	19	\$0.00	\$0.00	0	0
3/16/2014	4	\$0.00	\$0.00	0	0
11/16/2014	9	\$0.00	\$0.00	0	0
1/23/2015	12	\$0.00	\$0.00	0	0
2/16/2015	71	\$0.00	\$0.00	0	0
3/4/2015 – 3/5/2015	53	\$145,000.00	\$0.00	0	0
1/20/2016 – 1/22/2016	73	\$50,000.00	\$0.00	0	0
2/14/2016	78	\$0.00	\$0.00	0	0
3/3/2016	9	\$75,000.00	\$0.00	0	0
1/5/2017	2	\$0.00	\$0.00	0	0
1/12/2018 – 1/16/2018	40	\$0.00	\$0.00	0	0
3/11/2018	15	\$20,000.00	\$0.00	0	0
3/24/2018	12	\$0.00	\$0.00	0	0

## **Probability**

Below are tables of frequency of Winter Storm, Ice Storm, Heavy Snow, and all three combined for the years 2013 – 2018 and for the years 2001 – 2018.

It is noticeable from the tables below that the NCEI Storm Events Database records separate dates as separate events. This assessment does consider an “event” so literally: If an event was separated by a day or couple of days, it all counted as one event.

Probability is expressed as average frequency of occurrence within a given year.

Probability is first expressed in terms of the six years within which that is covered by this commonwealth hazard mitigation plan update for 2018.

However, to account for the winter storm activity occurring since both the implementation of the Disaster Mitigation Act amendment to the Stafford Act (that is an amendment to the Disaster Relief Act) and to parallel the future conditions assumptions described later in this section, event frequency per year was determined for 2001 – 2018, as well.

**Table WS-4. Severe Winter Storm Events, Annual Frequency, 2013-2018**

<b>Year</b>	<b>Winter Storm Events</b>	<b>Ice Storm Events</b>	<b>Heavy Snow Events</b>	<b>Events Combined</b>
2013	5	3	3	11
2014	7	2	5	14

<b>Frequency Per Year (/18)</b>	<b>2.72</b>	<b>1.28</b>	<b>4.28</b>	<b>8.28</b>

Of the top 25 weather events ever recorded from the National Weather Service's Louisville Field Office, seven (7) events have been severe winter storms. These are listed below in order to illustrate extent of the severe winter storms for the Commonwealth of Kentucky<sup>3</sup>.

## 1951 Ice Storm and Cold Blast

January 29 - February 3, 1951

An extremely strong high-pressure system started making its way into the region, pulling harsh, cold, polar air in with it. In the meantime, a strong low pressure system was moving through areas farther south along a cold front, stretching from the Gulf of Mexico and up into the Northeast. The cold front caused temperatures to drop, so that on the evening of January 30th, temperatures for Nashville, Tennessee, were only at 18 degrees Fahrenheit (-8 degrees Celsius). However, temperatures just above the surface at 5,000 feet were actually above freezing, registering at 48 degrees Fahrenheit (9 degrees Celsius). This was the perfect set up for the development and occurrence of freezing rain and sleet.

In Bowling Green, almost 3 inches of snow and sleet had covered the city by morning of the 31st, causing roads to become almost impassible. By noon, the snow had turned to rain due to the above freezing warmer air aloft, however on the surface temperatures had only risen to 28 degrees Fahrenheit. This caused the rain to freeze upon impact, worsening the traffic situation. Bulldozers were called out to help the effort and scrape the ice, with little effect.

Then a turn for the worse occurred yet again. By the next morning, on February 1, temperatures started dropping dramatically. Before the day was over a low of -1 degrees Fahrenheit had been recorded, and another 7 inches of snow had fallen. Travel by this point was virtually impossible, causing major delays for airlines, busses, and trains throughout the state. Damage was reported throughout the region as tree limbs cracked and fell onto power lines due to the dense ice packed onto them.

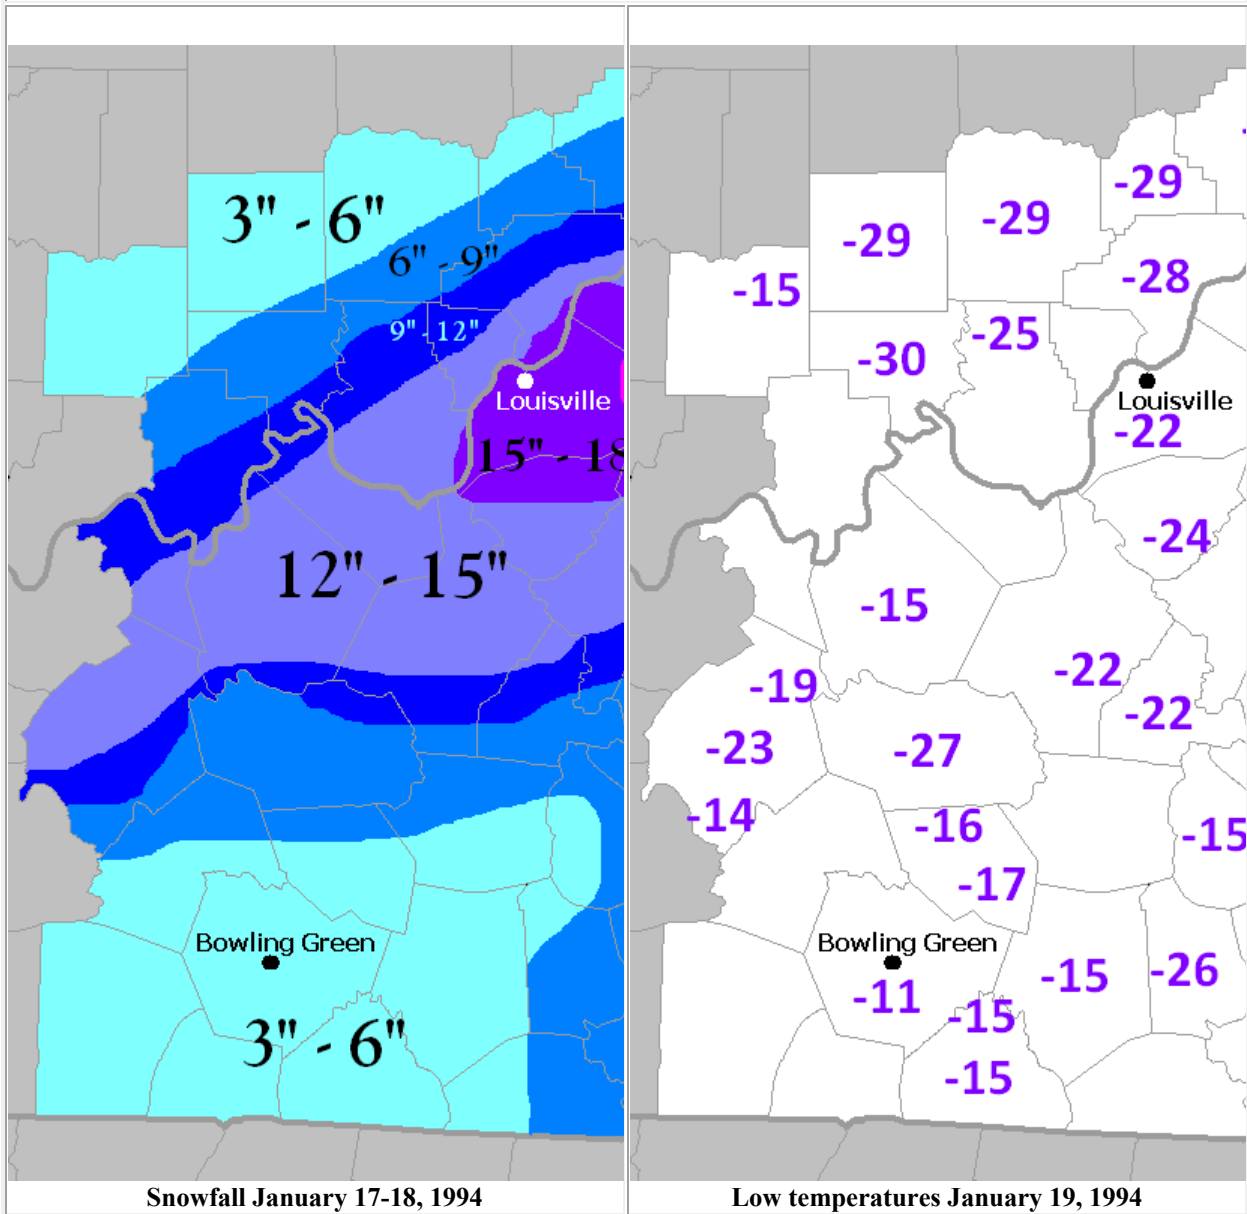

The cold only continued. At 4:45 a.m. February 2, Bowling Green recorded a temperature of -20 degrees Fahrenheit, the coldest official temperature ever recorded up to that time. The precipitation continued as well, leaving behind 9 inches of snow and sleet on the ground in Southern Kentucky. Crews were working around the clock to restore both power and phone lines. Water pipes burst under the extreme cold, transportation remained halted, temperatures remained unbearable, and ten days later the area had yet to recover from the ice and the snow.

The Great Ice Storm of 1951, as it came to be known, covered the south in a linear path of ice from Louisiana to Ohio. Heaviest accumulations fell in a line from Memphis to Nashville, Tennessee and northeastward into Lexington, KY. It was the costliest winter on record for the time, causing an estimated \$100 million in damage. The impact on forest, livestock, crops and fruit trees was responsible for \$64 million of that total. It is estimated that 25 people lost their lives across the areas affected by the storm, and another 500 were injured.

<sup>3</sup> See: "Top 25 Weather Events in WFO Louisville CWA". [https://www.weather.gov/lmk/top\\_25\\_weather\\_events](https://www.weather.gov/lmk/top_25_weather_events).

# Record Snow and Cold

January 17 - 19, 1994

An intense winter storm brought copious amounts of snowfall to the region Monday the 17th, with all of Kentucky and southern Indiana receiving several inches of snow. A band of particularly heavy snow set up from Shelbyville through Cynthiana to Maysville where nearly two feet fell. At Louisville a single-day snowfall record of more than 15 inches was set.

The heavy snow set the stage for what was to come next. Behind the storm an intensely cold air mass dumped south out of Canada, sending temperatures plunging well below zero by Wednesday the 19th. Not only did Louisville record an all-time low of -22 degrees, but Shelbyville set a new record low temperature for the entire state of Kentucky with a reading of -37! Lexington came within one degree of their all-time record low.

## 1998 Snowstorm

February 3 - 6, 1998

A very unusual winter storm paralyzed the region in early February of 1998. The storm dumped up to two feet of snow across parts of northern and eastern Kentucky, and used moisture from the Atlantic Ocean rather than from the Gulf of Mexico to do it.

In central Kentucky three people were killed and four injured. Several million dollars in damage was done as trees and power lines collapsed under the weight of the snow. Over the course of the four days Louisville was buried under 22.4 inches of snow, which is the all-time snowstorm record total for the city. Of that amount, a foot and a half fell on the 4th and 5th, resulting in a State of Emergency Declaration.

Around central Kentucky, snow depths at the end of the onslaught were over a foot, with a snowpack two feet deep reported at Liberty in Casey County.

At Louisville, February 4, 1998 still stands as the 5th snowiest single day on record, the snow depth of 18 inches on February 6, 1998, is the city's 2nd deepest snow depth on record, and February 1998 stands as Louisville's 4th snowiest month in history. In Lexington, unofficial reports of a snow fall of 11 inches on the 4th and a depth of 18 inches were received.

## Bluegrass Ice Storm

February 15 - 16, 2003

**Lexington, Kentucky**

By late afternoon on February 15, a cold dreary rain changed to freezing rain as northeast winds brought in colder air from southern Ohio. Thus began the infamous Bluegrass Ice Storm of 2003. Freezing rain fell nearly continuously through the next morning as temperatures fell into the upper 20s. Hardest hit were the cities of Frankfort and Lexington, where ice accumulations were around 1 inch on exposed branches and sidewalks. One person was killed in Lawrenceburg when struck by a falling ice-covered tree limb. Countless trees were destroyed and many area residents lost power for up to a week. According to the Kentucky Public Services Commission, power was knocked out to 280,000 customers. Over 3000 power poles were destroyed and nearly 800 transformers needed to be replaced. The total cost to area utilities was about \$47 million, with another \$26 million used by local municipalities to clean up the damage.

## Christmas '04 Snowstorm

December 22 - 23, 2004

**A car buried in snow in Milltown, Indiana.**

During the 2004 snowstorm snow fell in southern Indiana at rates of as much as four inches per hour with storm totals as high as 32 inches and drifts to five feet. In Louisville, six inches of sleet combined with several inches of snow. Power was out for two days to 33,000 Louisvillians. Thundersnow and thundersleet were observed during the height of the storm. Farther south in central Kentucky, freezing rain deposited an inch of solid ice on all exposed outdoor objects, causing some roof collapses.

Interstate 64 was closed for three full days. Interstate 65 was still down to just one passable lane in places on Christmas Day.

The timing of the storm was unfortunate, occurring on some of the busiest travel days of the year, and stymieing last-minute Christmas shopping. Local businesses lost up to 80% of their expected sales during the storm.

*Photo: Angela Crecelius*

## 2007 Easter Freeze

April 5 - 10, 2007

**Record daily snowfall on April 6, 2007, for Opening Day at Keeneland Race Track in Lexington.**

The last ten days of March 2007 had been unusually warm, with high temperatures in the 70s and 80s each day. A cold front passed through the region on April 3, which brought extensive severe weather and also ushered in a massive dome of frigid Canadian air. From the 5th to the 10th of April temperatures dropped into the 20s and 30s each morning throughout the entire region. Bowling Green spent a total of 47 hours (non-consecutive) below freezing, bottoming out at 22 degrees on the 8th. Louisville fell to 25 on the 7th and Lexington dropped to 22 degrees on both the 7th and 8th.

The March warmth caused significant early spring crop and plant growth, which was then devastated by the six straight days of well below freezing temperatures in April. Losses were suffered in nearly all crops, including peaches, apples, pears, cherries, raspberries, blackberries, strawberries, blueberries, grapes, corn, soybeans, and wheat. Almost all of the peaches were destroyed. Half of the wheat crop was destroyed with \$63,000,000 in damage. The corn crop recorded \$5,000,000 in losses. Of the twenty million dollar fruit industry, \$16,000,000 in damage was incurred. Depending on the variety, up to 90% of grape crops were lost.

Total losses in this region were well over \$130,000,000.

Drought set in over the summer and early fall months of 2007, which caused additional stress on local agriculture, but it was the April freeze that did the lion's share of the damage.

## Ohio Valley Ice Storm

January 26-28, 2009

A wintry mix moved into southern Indiana and central Kentucky on the night of Monday, January 26, 2009. Precipitation began as light freezing drizzle and freezing rain over the entire area, but changed to sleet and then snow overnight into the early morning hours of Tuesday across southern Indiana and northern Kentucky. Up to 6 inches of snow accumulated across the northernmost sections of the CWA. Freezing rain continued over southern Kentucky. On Tuesday the 27th, precipitation changed to freezing rain over southern Indiana and northern Kentucky, and to rain over southern Kentucky. Ice over an inch thick was reported in many locations from the freezing rain. Tuesday night freezing rain and sleet continued over southern Indiana, freezing rain transitioned to rain over northern Kentucky, and rain, occasionally heavy, continued over southern Kentucky. Minor...mainly river flooding developed in some spots by Wednesday from the steady rain. On the morning of Wednesday, January 28, precipitation changed over to snow from northwest to southeast across the area. About 3 to 4 inches of additional snow accumulation piled up in the north, with less to the south.

The storm caused Kentucky's largest power outage on record, with 609,000 homes and businesses without power across the state. Property damage was widespread, with the damage due to falling trees, large tree limbs, and power lines weighed down by ice. In the Louisville metropolitan area, 205,000 lost power and it took up to 10 days to get everyone hooked back up. Area school systems were closed for an entire week. Several emergency shelters were set up across the affected region. In Louisville's local school system, 69 schools lost power.

## Vulnerability

It is safe to assume given the historic severe winter storm events suffered by Kentucky that the entire Commonwealth of Kentucky is equally vulnerable to the deleterious effects from severe winter storms and that all commonwealth assets are vulnerable equally. Thus, below is tabled the total replacement cost value (RCV) of commonwealth assets by county as provided by the Kentucky Finance and Administration Cabinet's Division of State Risk and Insurance Services (DSRI). The potential estimated losses to commonwealth assets from severe winter storms are equal to total RCVs of all commonwealth assets. Assets included in DSRI's list include buildings, buildings and contents, and farm buildings values for all assets that the Commonwealth owns and has insured. Critical facilities, universities and their assets, and parks populate the list. Infrastructure like bridges and roadways are not included in the value of the below assets.

**Table WS-6. Potential Losses to State Assets from Severe Winter Weather by County**

<b>County</b>	<b>Total State Asset RCV</b>
Adair	\$ 15,599,957.43
Allen	\$ 866,998.36

Estimating potential losses from commonwealth-owned assets as a result of winter storms is a bit specious. Unless indirectly – e.g., as a result of downed trees or powerlines or the result of flooding as ice and snow melt damaging a structure – heavy snow and ice is not going to damage significantly commonwealth-owned assets. Snow-and-ice is not wind or the living dead busting through windows and doors and, thus, causing damage to a structure.

Rather, estimated potential losses from winter storms might best be illustrated by computing potential productivity losses for the Commonwealth that could result from a particularly severe winter storm event. The most straightforward way of looking at this is to count all commonwealth workers and cite the value of all those workers. Estimated potential losses from a severe winter storm, then, could assume outright that no state worker is able to come to work for a defined period.

So, to estimate potential losses, this analysis uses the Annual Survey of Public Employment and Payroll (ASPEP) produced by the U.S. Census<sup>4</sup>. The most recent ASPEP at the time of this writing was released on September 28, 2017 and reports survey results for 2016. The ASPEP survey reports on one month – March – and records the total number of full-time and part-time commonwealth public employees (including a calculation of full-time equivalent employees) and records the gross payroll for the month of March for all full-time and part-time commonwealth public employees. Specifically, payroll amounts represent gross payrolls for the 1-month period of March (31 days). The gross payroll includes all salaries, wages, fees, commissions, bonuses, or awards paid to employees during the pay period that includes the date of March 12. Payroll amounts reported for a period other than 1-month are converted to represent an amount for the month of March. All payroll figures are represented in current whole dollars and have not been adjusted for inflation. Conversion of a reported payroll to a payroll amount that would have been paid during a 31-day month is accomplished by multiplying the reported payroll by an appropriate factor. For example, a two-week payroll is multiplied by the ratio of 31/14, a one-week payroll is multiplied by the ratio of 31/7, and a twice-a-month payroll is multiplied by 2.

---

<sup>4</sup> See: <https://www.census.gov/programs-surveys/apes/newsroom/updates/2016-apes.html>. [Last accessed: 9/12/2018]. The results from the ASPEP survey are published online on the American FactFinder website. Specific to this analysis, the most recent ASPEP results for Kentucky can be found at the following link: [https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=GEP\\_2015\\_00A2&prodType=table](https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=GEP_2015_00A2&prodType=table).

According to ASPEP, Kentucky employs 74,313 full-time public workers. These public employees represent the following categories or fields: Financial Administration; Judicial and Legal; Police Protection; Fire Protection; Corrections; Highways; Air Transportation; Water Transport and Terminals; Public Welfare; Health; Hospitals; Social Insurance Administration; Solid Waste Management; Sewerage; Parks and Recreation; Housing and Community Development; Natural Resources; Water Supply; Electric Power; Gas Supply; Transit; Education; Libraries; State Liquor Stores; "Other" Government Administration; and an "All other and unallocable" category.

The one-month (31-day) reported payroll as described above for all 74,313 full-time public workers was \$332,405,399. This translates to an average of \$144.29 per full-time public employee per day<sup>5</sup>.

Because full-time employment is salaried, any day not spent at work by a public employee is a loss for the Commonwealth of \$144.29. After all, the Commonwealth still must pay the public employee that \$144.29 for the day that she or he was not able to be productive.

Additionally, the ASPEP survey reports the Commonwealth of Kentucky as employing 25,571 part-time public workers. Gross payroll for these 25,571 public employees for a 31-day month was recorded as \$27,918,843. This translates to an average of \$35.22 per part-time public employee per day. It is arguable that the Commonwealth would "lose" the \$35.22 per part-time public employee per day if that part-time public employee could come to work because of a severe winter storm. After all, part-time work is paid typically hourly and only while working. However, this estimate of potential losses includes the \$35.22 lost per part-time public worker per day because of Full-Time Equivalent (FTE): ASPEP computes an FTE that is interpreted as the number of full-time public employees that could be hired if all part-time employees were replaced with full-time ones. So, to estimate potential losses from lack of productivity resulting from severe winter storms, it is assumed that part-time public employees are converted to FTE and are paid \$35.22 per FTE employee per day.

Estimated potential losses, then, from a severe winter storm are \$179.51 (\$144.29 + \$35.22) per day per commonwealth public employee in lost productivity.

Given Kentucky's past experiences with winter and ice storms, it is not hyperbolic to assume that it is a possibility that all commonwealth public employees could necessarily be absent from work for days at a time as a result from a prolonged severe winter storm or ice storm. Converting part-time commonwealth public employees into FTE, Kentucky employs 85,606 full-time and FTE employees. If none are able to come to work for one day, the Commonwealth potentially could lose \$15,367,133.06 for that day (85,606 x \$179.51 per day).

Given the examples of extent above, it would not be absurd to assume that four (4) or five (5) days could be missed due to a particularly severe winter storm, ice storm, and/or heavy snow event.

---

<sup>5</sup> \$332,405,399/74,313 Employees/31 Days = \$144.29

So, estimated potential losses for the Commonwealth could top \$61,468,532.24 to \$76,835,665.30 in economic and productivity loss.

## Local Jurisdiction Vulnerability and Vulnerability from Local Mitigation Plans

Kentucky’s local hazard mitigation plans all generally assume that each of their jurisdictions is equally vulnerable to severe winter storms and assume that all identified local assets are at risk and, thus, estimated potential losses are the estimated losses from all identified assets. These estimated losses are listed below. While assuming that a snow or ice storm will essentially obliterate any asset is a bit dramatic, it is illustrative that all assets are equally vulnerable to snow and ice and it is the best available estimates given that the preferred alternative, i.e., indirect losses to assets resulting from tree-falls, downed power lines, frozen pipes, etc., would require extensive and expensive studying and engineering that would rely heavily on assumptions. Unless otherwise stated (in footnotes), the values in the list reflect values for residential, commercial, industrial, agricultural, religious, educational, and governmental building stock.

**Table WS-7. Summary of Potential Loss Estimates for Severe Winter Storms for Identified Assets from Local Hazard Mitigation Plans**

Area Development District	County	Estimated Losses
Barren River ADD	Allen	\$ 9,670,842,041.00

	Whitley	\$ 426,394,400.00
FIVCO	Boyd	\$ 3,373,238,000.00
	Carter	\$ 1,219,671,000.00
	Elliott	\$ 272,465,000.00
	Greenup	\$ 2,063,959,000.00
	Lawrence	\$ 684,745,000.00

<sup>6</sup> Bluegrass ADD uniquely considered estimated potential losses in purely subjective terms. Its regional hazard risk assessment admits the weaknesses apparent in most local hazard mitigation plans that estimating potential losses for most hazard types usually require the unhelpful assumption that all assets are equally vulnerable. Bluegrass ADD defined a Calculated Vulnerability Risk methodology: Past occurrences for each hazard type were recorded regionally and then averaged with local rankings of potential for future events to occur, the overall vulnerability ranking of each hazard, and, relevant to this section, total potential impact. A “LOW” score for potential impact was defined as total cost of impact would be less than \$50,000. A “MODERATE” score for potential impact was defined as total cost of impact would be greater than or equal to \$50,000 and less than or equal to \$500,000. A “HIGH” score for potential impact was defined as total cost of impact would be greater than \$500,000.

<sup>7</sup> Fayette County writes its own multi-hazard mitigation plan independently of the Area Development District to which it belongs.

<sup>8</sup> Cumberland Valley ADD estimated potential losses only for critical facilities.

Area Development District	County	Estimated Losses

	Marshall	\$ 2,457,186,169.00
	McCracken	\$ 5,111,587,459.00
	Region CF <sup>11</sup>	\$ 3,187,950,000.00

<sup>11</sup> The Purchase ADD did not disaggregate by county the estimated potential losses to its Critical Facilities (CF). So, the \$3.187 million dollar number reflects the additional losses for the whole region from vulnerable critical facilities.

While it is generally (safely) assumed given Kentucky's history with severe winter storm events that the entire commonwealth and, thus, each county within the commonwealth is equally vulnerable to severe winter storms, one way to differentiate effects from snow and ice per county and thus to differentiate vulnerabilities between counties is to rely on the productivity vulnerability described above: The most troublesome aspect of severe winter storms (besides the snow-melt and ice jam flooding, of course) are their effects on productivity and the resulting economic losses that accrue. Severe winter storms either prevent productivity or shorten the productive workday or lessen consumption by dramatically lengthening the amount of time it takes to get to work.

So, looking at a map of the Commonwealth of Kentucky and its county differentiation in the average time it takes to get to work implies county-specific vulnerability to severe winter storms: The counties with the longer average times to get to work will be more vulnerable to the effects from severe winter storms than counties with less average times to get to work. Further, as the discussion from the 2018 KAER will mention, average travel times to work also are correlated with economic centers and infrastructure status, both of which are affected by severe winter storms. Areas of longer average travel times to work due to higher economic activity will lose more to lost productivity resulting from severe winter storms. Areas of longer average travel times to work due to infrastructure constraints (e.g., the mountainous eastern and southeastern Kentucky) also are especially vulnerable to severe winter storms more directly in that populations could be stranded and immobile without access to resources or heat.

The following map of average travel time to work derives from the most recent (i.e., 2018) Kentucky Annual Economic Report (KAER) published by the Center for Business and Economic Research (CBER) of the Gatton College of Business and Economics at the University of Kentucky (UK). The map uses the most recent five-year U.S. Census Bureau's American Community Survey results (that showed data to 2016). The map is found on page 187 of the 2018 KAER.

## Average Travel Time to Work, 2012-2016 (Workers 16 Years and Older)

Source: U.S. Census Bureau, 2016 5-Year American Community Survey

From the 2018 KAER, p. 187:

“An estimated 76.4 percent of Americans 16 years and older drive to work alone, which is near an all-time high. By comparison, carpooling is around 9.3 percent and public transportation accounts for about 5.1 percent. The rest use some other form of transportation, like biking, or work from home. Reflecting both economic centers of gravity as well as the state of the infrastructure network, the map [above] illustrates Kentucky’s county-level average travel times to work. An estimated 82.2 percent of Kentuckians drive to work alone. Kentucky’s statewide average of 23 minutes is less than the U.S. average of 26.1 minutes (based on 5-year pool 2012-2016 data). The counties in the map are divided into one of three categories: below the Kentucky average; above the Kentucky average but below the U.S. average; and above the U.S. average. Christian County in Western Kentucky has the lowest average travel time at 16.5 minutes, while Martin County, located in Eastern Kentucky near the West Virginia border, is the highest at 38.5 minutes. The *Wall Street Journal* reported in November 2017 that traffic congestion incurred a \$1,400 cost on each driver in the U.S. last year due to wasted fuel, lost time, and decreased productivity<sup>12</sup> (Inrix Annual Scorecard). New York City led the way in congestion, and has an average travel time to work of 35.9 minutes, which is less than Martin and Bracken (36.6) Counties.”

<sup>12</sup> i.e., economic effects that would be exacerbated in the event of a snow or ice event and serving as an interpretation of county-specific potential estimated losses resulting from severe winter storms.

## **A Note on Future Conditions**

The Commonwealth of Kentucky Enhanced Hazard Mitigation Plan for 2018 (CK-EHMP 2018) has relied on a recent study on climate conditions from modeling specific to Kentucky that was conducted by the United States Army Corps of Engineers (USACE) and the Ohio River Basin Alliance (ORB Alliance). This study is called *Ohio River Basin: Formulating Climate Change Mitigation/Adaptation Strategies through Regional Collaboration with the ORB Alliance*.

From this study, the Commonwealth of Kentucky assumes the following:

- There has been a gradual warming trend throughout the Ohio River Basin since the late 1970s.
- Precipitation has increased during the latter summer and early fall months since the late 1970s.
- Summer highs and winter lows between 2011 and 2040 will remain generally within what has been observed over that historic period. (But, record temperatures, rainfall, or drought cannot be ruled out.)
- The influence of the jet stream across the Ohio River Basin latitudes increases the *variability* of the weather (and further complicates forecasting future climatic conditions).
- Significant changes in river flow discharges and mean annual air temperatures will not be occurring before 2040. The climate will not vary substantially from what has been experienced between 1952 and 2001.

In other words, there has been gradual warming since the late 1970s. This gradual warming will continue without much significant change until 2040. (After 2040, the modeling in the study predicts temperatures may rise one (1) degree every decade through 2099.) Further, part of this gradual warming since the late 1970s involves precipitation increases. Precipitation increases affects nearly every hazard identified in this hazard mitigation plan: Landslides are triggered by precipitation; sinkholes flood with increased precipitation; flash flooding increases from severe storms; and winter storms either increase or become more severe.

The variability interpretation also is interesting and applicable to expected future conditions for Kentucky's identified hazards:

With gradual warming and its effects on summer highs and winter lows, with increased precipitation, and with increased variability of the weather, it is expected that the probability (or, rather, the frequency and/or severity) of severe winter storms, heavy snow, and ice storms will increase.
